

## **Project Details**

**Company Project Name: V2V Agrilythos (AGX)**

**Official Project Title:**

**Solar-Powered Smart Irrigation and Fertigation System with AI-Based Pest Detection**

## **Project Objective**

To develop a reliable, solar-powered intelligent irrigation and fertigation system that integrates Embedded Systems, IoT, Artificial Intelligence, and Computer Vision to improve agricultural productivity while promoting sustainable resource utilization.

## **Project Work Structure**

The project has been divided into four major technical domains:

1. Mechanical System (*Initial development by technicians*)
2. Solar Power System (*Initial development by technicians*)
3. Embedded & IoT Engineering (*Core V2V Development Team*)
4. AI & Software Engineering (*Core V2V Development Team*)

Since the Mechanical and Solar systems will initially be handled by technicians, our primary engineering efforts will focus on the Embedded & IoT and AI & Software domains.

## **Technical Teams**

### **Embedded & IoT Engineering**

**Technical Guide:** Sivarami Reddy

- Rahul – IoT Systems
- Guruganesh – IoT Systems
- Deepak S – Embedded Systems
- Deepak M – Embedded Systems

### **AI & Software Engineering**

#### **Software & Applications**

**Technical Guide:** Bavanieswaran

- Arjun – Web, Mobile Application & AI Integration

## **AI & Computer Vision**

**Technical Guide:** Sivagurunathan

- Aakash – AI Development
- Kiran – Computer Vision

## **PMO Responsibilities**

This group will serve as the central platform for:

- Project planning and coordination
- Technical discussions and decisions
- Procurement approvals
- Documentation and evidence management
- Progress tracking and milestone reviews
- Grant compliance and reporting
